

Field-scale water diagnosis, consumptive-use analysis, and irrigation simulation.

BAITSSS Desktop V1 is a scientific system for field-scale evapotranspiration, soil water, irrigation analysis, and field investigation.

From satellite and hourly weather inputs to completed scientific results.

The desktop workflow combines Landsat observations, terrain, soils, land cover, and NLDAS hourly weather with BAITSSS simulation and result analysis.

ACTUAL KANSAS GMD4 BAITSSS RESULT

Total ET map | completed run | 30 m grid

NLDAS HOURLY WEATHER

Meteorological forcing

30 m ET MAP

Field-scale spatial output

PIXEL HOURLY CSV

Inspect individual locations

RUN REPORT + EXPORT

Move results outside the app

What you do with BAITSSS Desktop

01 DEFINE

Set the AOI, project, and simulation period.

02 PREPARE

Verify Landsat, DEM, soils, land cover, and NLDAS hourly weather.

03 RUN

Execute the hourly BAITSSS scientific simulation.

04 RESULTS

Inspect ET, soil water, weather, irrigation, maps, time series, and exports.

SCIENTIFIC FOUNDATION

Two-source energy balance + two-layer soil-water balance

Hourly NLDAS forcing | Landsat | 30 m analysis
