

Bring the problem first.

A standard path for students, advisors, researchers, agencies, consultants, and organizations. Start with the problem; the appropriate BAITSSS pathway is decided afterward.

Core principle

Start with the scientific, field, or water-management problem. We first determine whether BAITSSS is a reasonable fit. Only then do we decide the appropriate level of analysis, collaboration, software access, training, or support.

WHAT TO SEND FIRST

A short first message is enough.

1. Place	Field, farm, district, basin, research site, or study area.
2. Period	Event, growing season, year, multi-year period, or another time window.
3. Question	What needs to be understood, compared, estimated, investigated, or supported.
4. Evidence	Available irrigation, weather, soil, field observations, remote sensing, or other data.

HOW THE REQUEST IS HANDLED

One standard path for every inquiry.

VALIDATION, BENCHMARKING & PROJECT SCOPE

Independent evaluation is welcome, but it is still project work.

No free validation entitlement.

BAITSSS is not distributed free because another project wants to validate, benchmark, or compare its own method. Evaluation work can be proposed, but analysis, software access, technical support, and BAITSSS participation are scoped like other research or professional work. Source-code transfer is a separate decision and is never automatic.

WHAT BAITSSS MAY PROVIDE

The support is matched to the problem.

Project analysis	ET, soil-water, irrigation, spatial, temporal, and model-output analysis.
Technical outputs	Maps, time series, exports, documented runs, figures, tables, and project records as defined in scope.
Research support	Study-design input, reproducible workflow, methods documentation, interpretation, evaluation, and collaboration where appropriate.
Training / Desktop use	Guidance or software access when running BAITSSS directly is the better solution.
Organization-level work	Licensing, integration, sponsored development, or technical partnership.

WHAT IS NOT AUTOMATIC

- **No guaranteed publication.** Technical support does not guarantee a paper or journal acceptance.
- **No free validation entitlement.** Validation or benchmarking does not create a right to free software, code, analysis, or support.
- **No automatic source-code transfer.** Code access requires a separate decision and appropriate arrangement.
- **No unlimited student support.** Substantial work is scoped with the advisor or project lead.
- **No assumption BAITSSS is always the right tool.** If a simpler product answers the question, we should say so early.

STANDARD FIRST RESPONSE

Thank you for your interest in BAITSSS.

Please send the problem, study area, period of interest, and available data or observations. We will first determine whether BAITSSS is a reasonable fit.

If this is student research, or the request involves validation, benchmarking, substantial technical support, software access, or source code, please include the advisor or project lead. We can then define the appropriate next step.

OPEN DOOR, DEFINED SCOPE

The first conversation is open to everyone. Pricing, access level, collaboration structure, and support are considered only after the problem and required work are understood.
